

# Embrace cloud-native solutions with our Cloud, SRE, and DevOps Studio

Accelerated development combined with reliable, secure, and scalable environments.

We offer comprehensive cloud solutions, encompassing end-to-end architecture design, migration services, in depth cloud audits, proactive monitoring and support, cloud security, container integration, and CI/CD pipeline development.

# Our approach to cloud engineering

## Infrastructure as Code

Log history of changes and fixes with version control. Ensure consistent and repeatable builds.

## Automation

Automate deployment and local setup. Boost developer productivity and promote service ownership.

## Monitoring and Error Tracking

Use tools to monitor performance and trace errors. Minimize failures and enhance stability.

## Scalability

Use container platforms like Kubernetes. Adjust performance and cost dynamically without major expenses.

## Security

Implement encryption, secure database access, strong authentication, and automated backups.

# We're proud to be an AWS Advanced Tier services partner

The Advanced Tier designation showcases our extensive expertise and commitment to providing top-notch AWS solutions.

The AWS logo, consisting of the lowercase letters 'aws' in a dark blue font with a curved orange arrow underneath pointing to the right.

Advanced Tier  
Services

# End-to-end cloud architectures

Our SRE Studio is ready to accelerate your cloud journey, providing the strategic roadmap to bring together both a cloud based backend, and a cloud delivery model.

We recognize that the transition to a cloud-based architecture is not just a technological shift, but a strategic evolution.

# Cloud architecture audits

We offer cloud architecture audits and incident response services to help detect, respond to, and recover from security incidents.

Our auditing and cost optimization service evaluates your environment, development process, and culture against industry best practices.

We assess your cloud infrastructure for performance, efficiency, and scalability improvements, streamline processes, reduce costs, and enhance scalability.

# Monitoring & support

Our proactive monitoring and support services ensure uninterrupted operations with real-time monitoring tools.

In case of incidents, we quickly resolve them and prevent recurrence by analyzing root causes.

We implement real-time monitoring to detect and address issues before they escalate. Our rapid incident resolution minimizes downtime and impact, while proactive analysis identifies and prevents underlying issues.

# Cloud security

Our cloud security service helps companies stay ahead of potential risks and ensure uninterrupted operations.

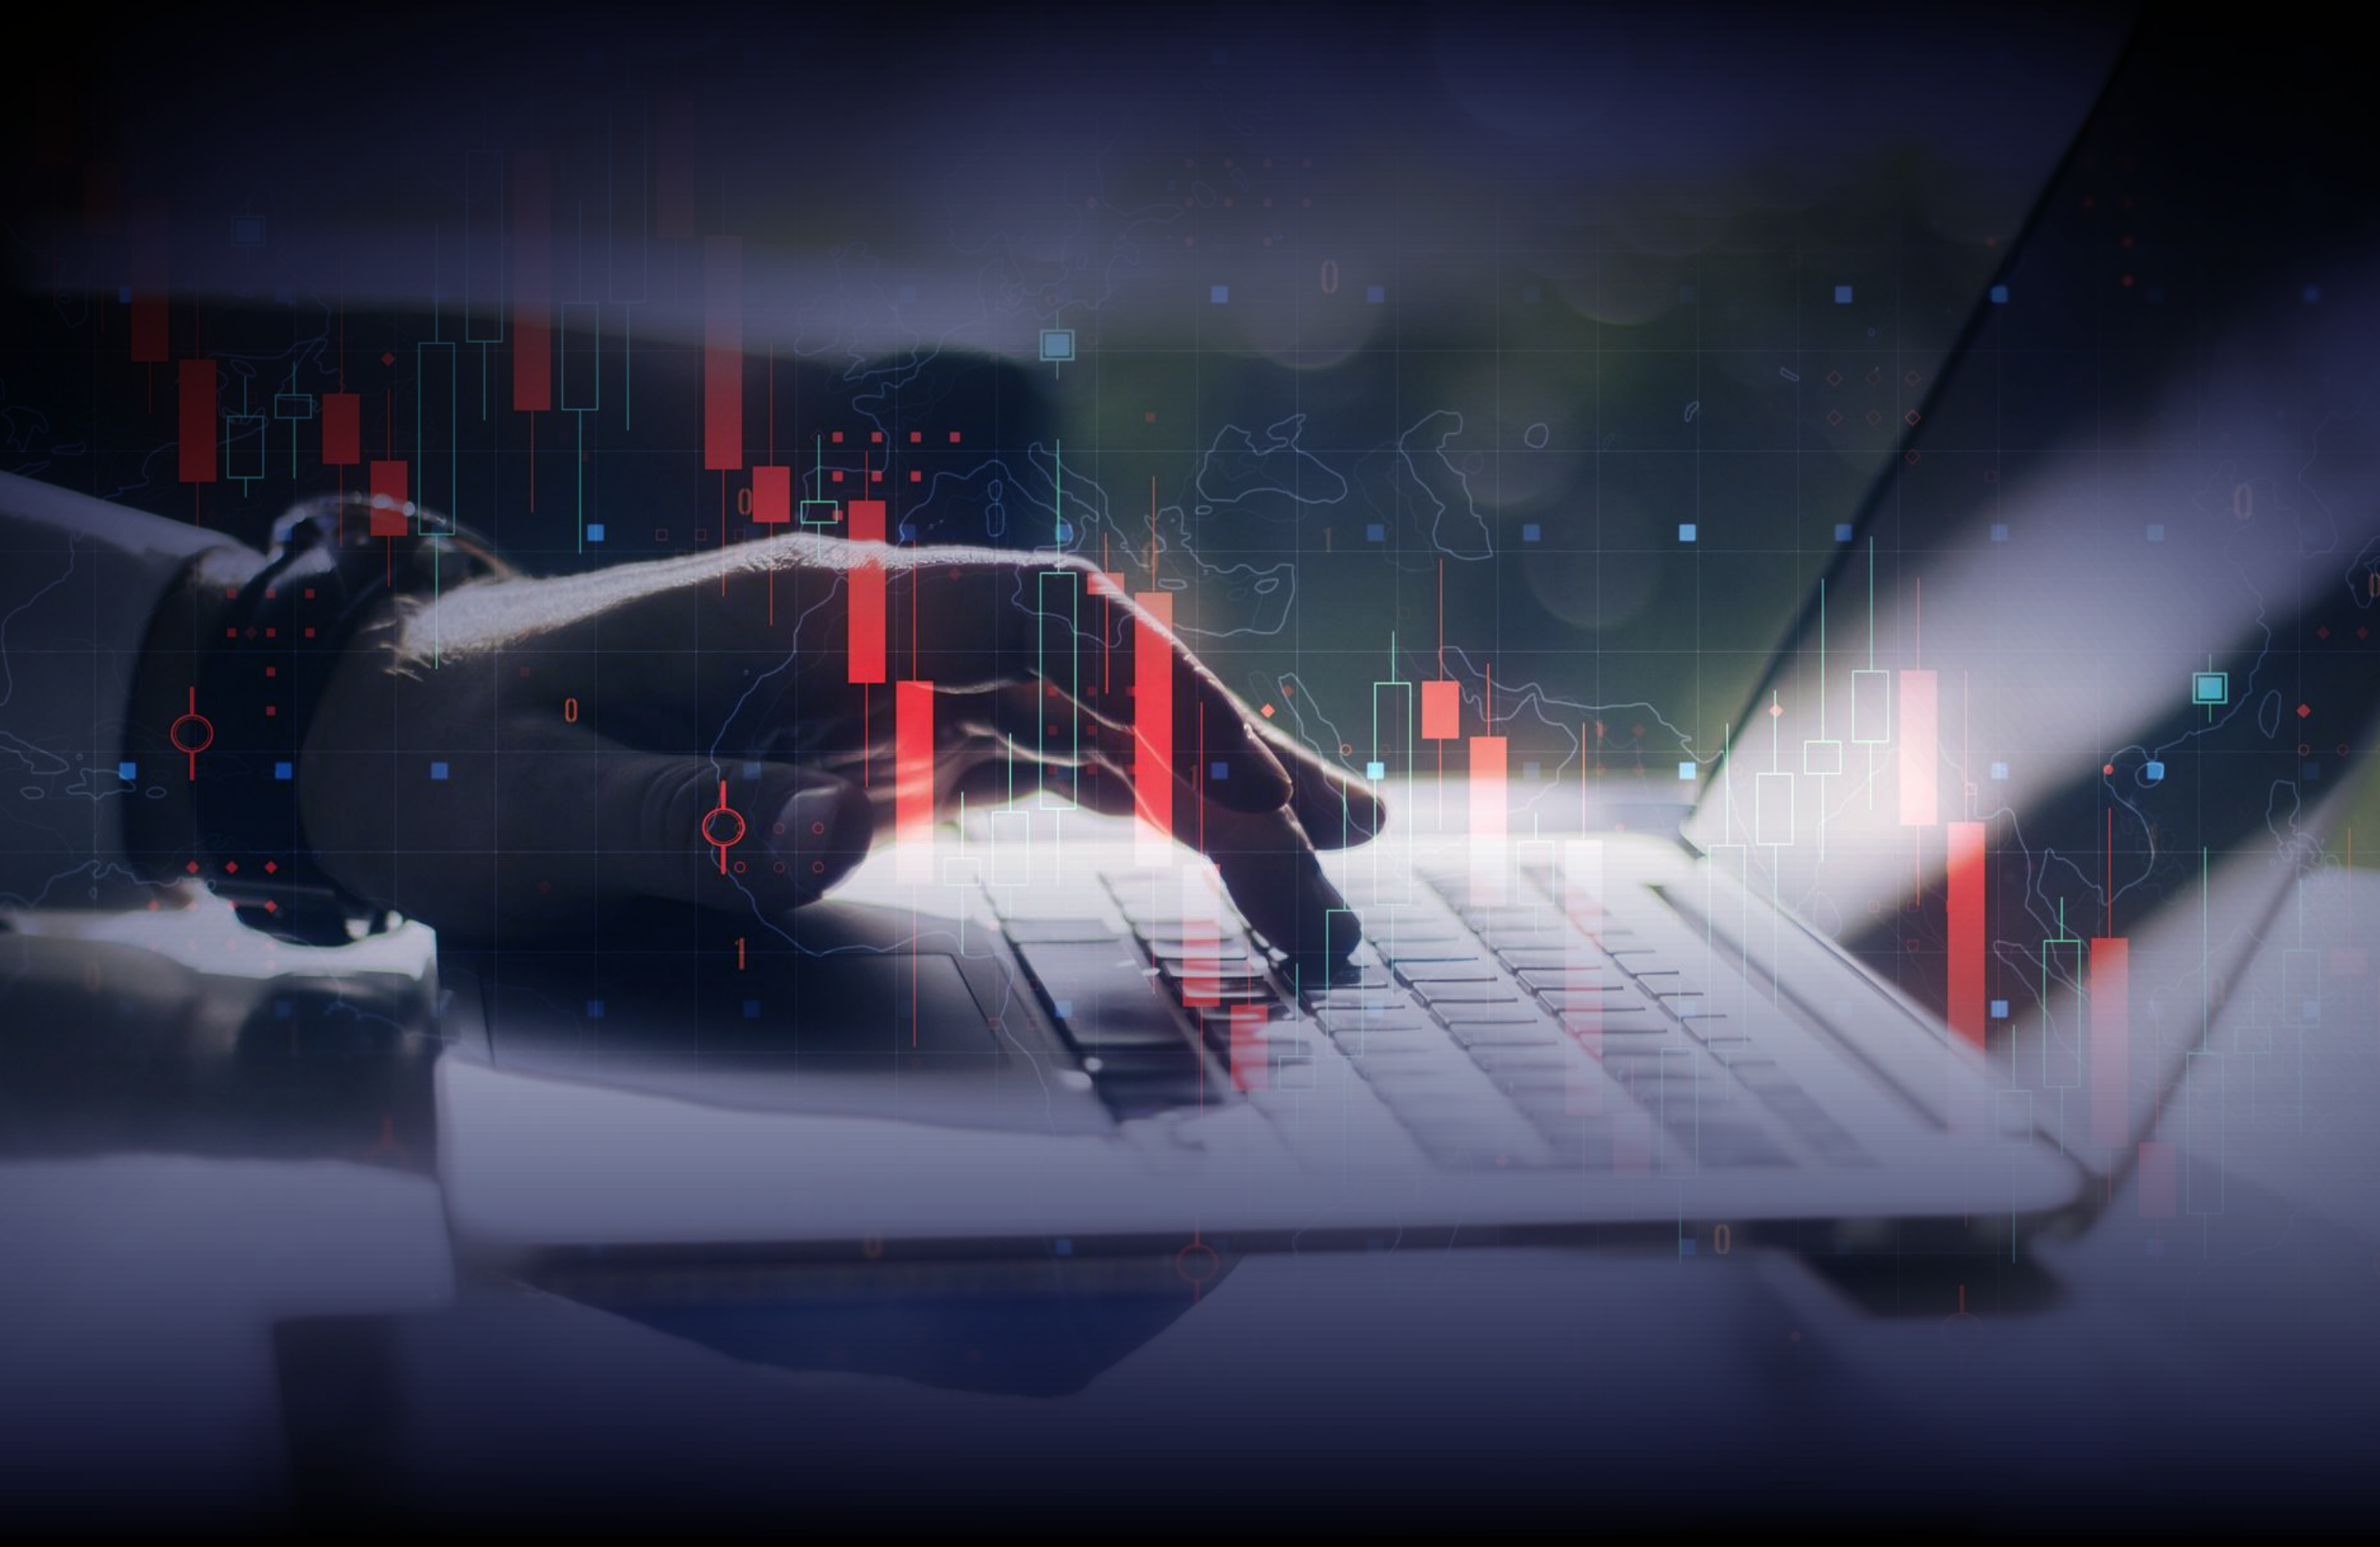

We provide advanced threat detection to neutralize risks early, conduct risk assessments to identify vulnerabilities, and perform continuous security evaluations for compliance with the latest standards. Our team also sets up automated guardrails to maintain compliance with security frameworks.

# Cloud cost optimization

We minimize cloud costs while maintaining performance by analyzing usage patterns and applying cost-effective strategies, saving clients up to 40%.

Our approach includes usage analysis, automation, cost reduction, improved forecasting, and scalability enhancements.
